Prathic Sundararajan

Irvine, CA. • [redacted] • psundararajan0@gatech.edu • PrathicSundararajan.github.io • https://www.linkedin.com/in/prathic/

Education

Georgia Institute of Technology, Atlanta, GA **2018-Present**

- Biomedical Engineering Major (BME)
- Computing and Artificial Intelligence Minor (CS)
- Senior Standing with a *4.0 GPA*

Experience

Health Technologies R&D Intern *Apple* Note: **Delayed due to COVID**

R&D Engineering Intern (Part Time) *HealthCare Evolutions* **May 2020-Present**

- Utilizing Solidworks skills on a project meeting unmet needs to help with COVID-19
- Working on creating initial prototypes based of patented design in ultrasound technology

Undergraduate Researcher *Gleason's Lab: Global Health Initiatives, GT* **August 2019- August 2020**

- Improved the efficiency of the current sensor/device prototype (hardware & software)
  - Revamped the Sensor & MATLAB Program interface (Sampling Rate Increase of 150%)
- Streamlined testing procedure by implementing continuous signal acquisition & analysis functionality
- Wrote preliminary testing protocols for testing to be used in IRB Approved Study [Starting Early March]
- Created initial quality standards & presenting work in upcoming conference

R&D Engineering Intern *HealthCare Evolutions* **May 2019-August 2019**

- Performed product analysis on a pain management pump with and without catheters
  - Designed and Conducted experimental analysis (automated data collection process)
  - Determined that flow rate remained within a ± 10% margin of error with and without a catheter
  - Concluded pump is safe to use with Catheters through trials of quantitative experiments
- Created & Submitted a 26-page technical report detailing the performance of the pump to the client
  - Conveyed our experiment findings & the importance of priming the catheter via the bolus function
  - Lack of priming led to a margin of error of 20-30% as shown by our experiments
- Created initial prototypes of *Ultrashield* (Recently patented Ultrasound Tech aimed to replace standard gel)
  - Utilized heat sealing techniques to create a 3 Layered Hydrophilic Pad: [Currently in Testing]

Undergraduate Researcher *Exoskeleton & Prosthetic Intelligent Controls Lab, GT* **2018-2019**

- Coded a MATLAB GUI (via appDesigner) to replace an inefficient Humotech controller
  - Implemented live data visualization & Image Processing to allow for tuning control parameters without pausing model during testing sessions (Increased efficiency by 25%)
  - Decreased the amount of time required for each testing session from 180 mins to 145 mins

---

Projects

EGHI/GT COVID-19 Hackathon Track Winners ($1k Prize) **Jun 2020**

BME Robotics (Humanoid Sub-Team) *Georgia Tech* **2019-Present**

- Utilized Solidworks, 3D Printers & CNC tools to build a humanoid with the following parts: a torso, shoulders, arms and a gripper

Robojackets (3lb Battlebot – Entropi *[Semi-Finalist]*) *Georgia Tech* **2018-2019**

- Designed a 15 part robot on CAD (Major Parts: Weapon, Frame, Bent Back Plastic Sheet, Holes & Screws)
- Designed & Machined the robot using CNC tools from stock materials (Steel, AL & HDPE)

Leadership

Suit Up Professional Preparation– *President* **2018-Present**

- Lead a team of freshman members in executing events geared towards professional development
- Organize social events with freshman attendance upwards of 100+ individuals throughout the year

Students Consulting for Non-Profit Organizations–*Sr. Business Analyst* **2018-2020**

- Created a donor analysis report using MATLAB to increase donor retention for City of Hope
- Identified patterns in donations by filtering 15,000 Data Points to write our donor report

---

Skills

Technical: 3D Printing, SolidWorks, CNC Machining [Familiar], Simulink, PPG, ECG, Catheters & Pumps
Certifications: Biotechnology Lab Assistant, CITI Training & CRLA Level 2 Certified Tutor
Programming: Java, Python, MATLAB and Apps/GUI, Arduino & HTML/CSS/JS **[Learning]:** Linux
