

HTML/CSS Notes v2

Prathic Sundararajan

1 HTML

1.1 Different Containers/Useful Tags

- a) div - This is often used with css elements

Property - "word-wrap: break-word"

- b) br - Can be used to add a line break between containers and w/o any close tag

- c) img - used to show images

TagLine- src= "linkToURL"

Property- min-width: 25

Property- max-width: 75

So these max and min properties represent how much of the actual container this image can take up. It is not referring to the size of the picture but rather the container. Need to set max to a 100 percent if you don't want it to overfill.

Property- border-radius: 50

This can be used to cut the picture into an oval

1.2 Useful Extra Stuff/Properties

- a) Flexed Container - This can be used to have things side by side

Refer to code to see the needed CSS formatting as well as how to format in html

2 CSS

2.1 Selectors

- a) Type Selectors

- b) Class Selectors

- c) ID Selectors
- d) Additional Selectors

2.2 Main Different Components

- a) Top Nav Bar

This is used to make a navigation bar at the top of the page

- b) Flex Box

This was very useful to have items side by side. Need to use max heights and width. Border radius allows you to cut up the picture into an oval

3 Interfacing

4 Git

4.1 Process to Use

- a) "git add ."
- b) "git commit"
- c) Type the required message
- d) Hit Escape
- e) Type ":wq"
- f) "git push"
